

DESIGNED AROUND THE WAY YOU LIVE

A kitchen that begins with what you need.

Kitchen updates and complete refurbishments for Dubai villas, apartments, penthouses and townhouses.

CABINetry / ISLAND / STONE / APPLIANCES / SERVICES

Begin with better storage, a new island or worktop, improved lighting or a complete kitchen. Método coordinates the connected details so the room works as one.

Home visits generally arranged within 48 hours · Free, no-obligation quote

Design development is included within the confirmed project scope.

Design directions · Concept imagery

START WITH THE PART THAT IS NOT WORKING

One room. Three levels of change.

The first conversation stays proportionate. If the right answer is a focused update, the scope stays focused. If the room needs wider work, every connected trade is planned together.

FOCUSED UPDATE

Improve cabinetry, storage, an island, worktops, splashbacks, lighting or selected appliance integration.

KITCHEN RENEWAL

Review the whole kitchen, retaining the layout where it works and coordinating new cabinetry, surfaces and selected services.

KITCHEN + ADJOINING ROOMS

Connect the kitchen with dining, pantry, family living, a media wall or other fitted joinery when the home needs a broader response.

NO AUTOMATIC WHOLE-HOME SALE

Other rooms can be reviewed at the same visit and kept as separate, connected or later phases.

Design directions · Concept imagery

STORAGE PLANNED AROUND REAL ROUTINES

Make room for what belongs there.

Cabinetry is considered from the inside out: what you store, how often you use it and the space needed to open, reach and return it.

DRAWER AND CABINET INTERNALS

Pan drawers · cutlery and utensil inserts · spice pull-outs · tray dividers · waste separation · small-appliance storage · tall pantry units

PANTRY / BACK KITCHEN

For larger villas and penthouses, a pantry or back kitchen can move food storage, preparation and small appliances out of the main room without losing the same material language.

DECIDE EARLY

What needs to remain visible
Appliance sizes and ventilation
Shelf heights and internal accessories
Lighting, sockets and service access

Design directions · Concept imagery

WHERE MATERIAL AND ENGINEERING MEET

The island should earn its place.

Its proportions, seating, supports, power, water and relationship to the rest of the room are resolved before the stone is templated.

STONE, SELECTED AS PART OF THE ROOM

Worktops and splashbacks are coordinated with the cabinetry, sink, hob and selected appliances. Movement, edge details, joints, cut-outs, supports and maintenance expectations are reviewed together.

CHOOSE A STONE

Design directions · Concept imagery

RESOLVED BEFORE INSTALLATION

Every appliance changes the room around it.

Model dimensions, ventilation, electrical loads, water points and service clearances are confirmed before cabinetry is approved.

APPLIANCE INTEGRATION

Ovens, refrigeration, coffee stations and concealed appliances are planned as part of the elevation—not inserted after it.

REVIEW THE EXISTING ROOM

A site review establishes dimensions, existing services, access and what can sensibly be retained.

COORDINATE THE JUNCTIONS

Cabinet and appliance ventilation
Sink, tap, water and waste positions
Sockets, switching and task lighting
Extraction route and ceiling depth
Stone cut-outs and final templates

Service access for maintenance
Adjacent flooring and wall finishes
Building or community requirements
Delivery access and permitted hours
Testing and final checks

Design directions · Concept imagery

THE PROPERTY CHANGES THE PLAN

Different homes. Different kitchens.

A compact apartment, a family townhouse and a villa with a back kitchen need different answers. The same layout should not be repeated everywhere.

APARTMENTS & PENTHOUSES

Efficient storage, fixed service positions, access, protection, deliveries, permitted hours and building requirements.

VILLAS & TOWNHOUSES

Larger islands, pantry or back-kitchen needs, connections to dining and outdoor areas, and more complex services.

A ROOM FOR DAILY FAMILY LIFE

Design directions · Concept imagery

QUIETLY INDIVIDUAL

Choose a palette. Then resolve the details.

Pale or dark, minimal or decorative, contemporary or quietly traditional. What matters is how surfaces meet, how the grain runs, where the light falls and whether the storage works every day.

DARK OAK / MINERAL STONE / BLACKENED METAL

MINERAL COLOUR / PALE STONE / NATURAL OAK

Stone · painted fronts · timber veneer · brushed metal · glass · hardware · lighting

Design directions · Concept imagery

PROTECT THE HOME. CONTROL THE SEQUENCE.

The invisible work makes the result feel effortless.

A considered kitchen depends on careful measurements, protected access, agreed information and the right order of work.

01

SHARE

Photos, a short video or a plan.

02

REVIEW

Measure the room, services and access.

03

AGREE

Confirm layout, materials and scope.

04

FREEZE

Approve appliances and key details.

05

COORDINATE

Sequence joinery, stone and services.

06

CHECK

Review the finished scope and handover.
