PRIVATE RESIDENCES · DUBAI

Your whole home, brought together.

A new apartment that needs completing. A villa that has outgrown the way you live. Or several rooms that should feel like one home. Método coordinates fitted interiors, specialist finishes, furniture and the final details through one clear programme.

THE STARTING POINT

Where are you starting?

The brief may begin with one room or the entire property. The important part is seeing what connects before work begins.

Refurbish an existing home

Rework the rooms, finishes and fitted elements that no longer suit the way the home is used. The existing condition is reviewed first, and the work is planned around access, protection and the family's use of the property.

Complete a new home

Take a handed-over villa, apartment or branded residence from developer finish to a considered, liveable home.

Furnish and style

Coordinate furniture, lighting, rugs, art, window treatments and final installation across the property.

Start with one room

Begin with a media wall, wardrobe, kitchen, majlis or study, while allowing for the rooms it may lead into.

Not every home needs every layer. The scope is defined around the property, the way it will be used and the work that genuinely belongs together.

CONNECTED ROOMS

One room often becomes more.

A media wall can reveal that the adjoining joinery no longer works. A wardrobe brief can open a conversation about the bedroom, bathroom and lighting. A kitchen update can affect the pantry, utility room, dining area and stone throughout the home. We begin with the immediate need, then show the connected decisions before they become separate jobs, repeated disruption or mismatched finishes.

Media walls

Screen, storage and finishes coordinated around the room.

Walk-in wardrobes

Fitted storage shaped around daily use.

Kitchens

Cabinetry, stone and connected services planned together.

Pantry and utility

Storage reviewed alongside the kitchen.

Bathrooms

Surfaces, storage and fittings coordinated as one room.

Majlis

Seating and service arranged around how you host.

Home office

Joinery and working interfaces resolved together.

Home cinema

The room coordinated around the agreed system.

Home gym

Equipment, finishes and storage planned around the activity.

Curtains and blinds

Window treatments within the agreed room scope.

LIVING ROOMS AND MEDIA WALLS

The room people gather in.

Screen, storage, stone and lighting coordinated around how the room is used, so the media wall belongs to the architecture rather than sitting on it.

KITCHENS AND PANTRY

Cabinetry, stone and services, planned together.

A kitchen update can affect the pantry, utility room, dining area and stone throughout the home. They are resolved as one scope.

WALK-IN WARDROBES AND DRESSING ROOMS

Fitted storage shaped around daily use.

Hanging, drawers, display, lighting and vanity are planned around what is stored and how the room is used each morning.

PRINCIPAL SUITES AND BATHROOMS

Surfaces, storage and fittings as one room.

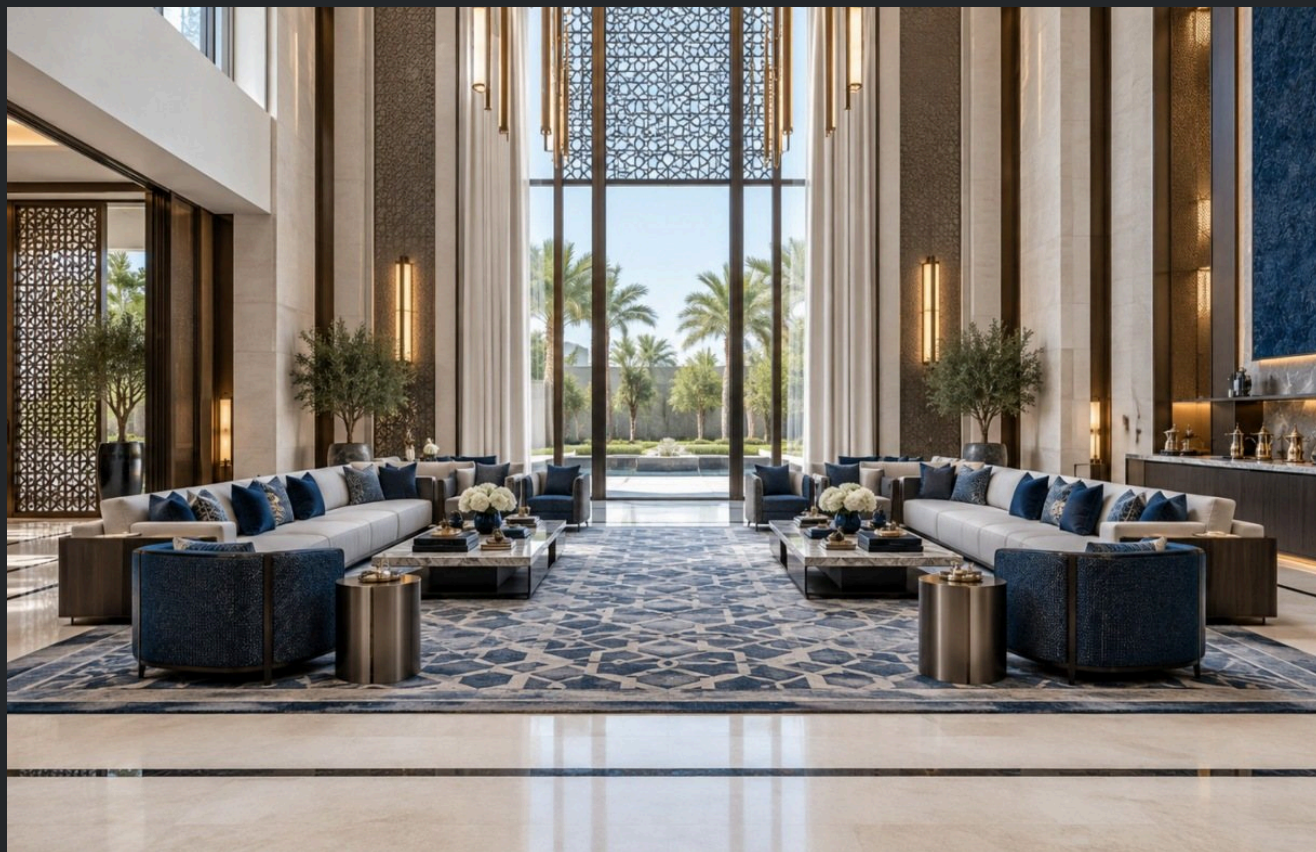

The bedroom, dressing area and bathroom are coordinated together, from stone and joinery to lighting and fittings.

MAJLIS AND ENTERTAINING

Seating and service arranged around how you host.

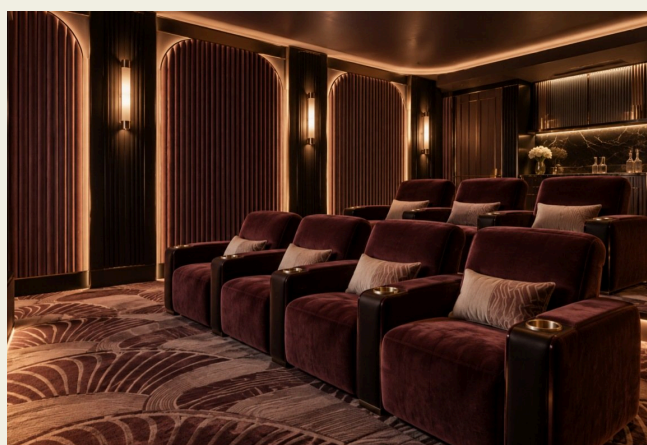

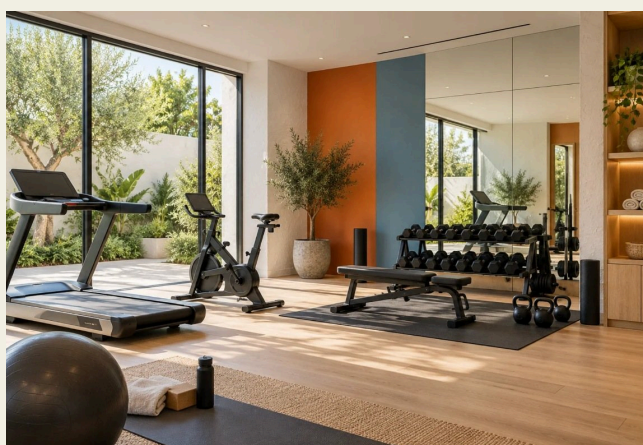

Formal and family majlis, dining and reception rooms planned for guests, service routes and the way the household entertains.

STUDY, CINEMA AND WELLNESS

Rooms built around a specific use.

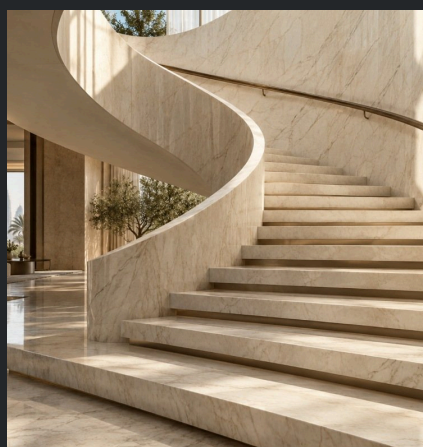

Home offices, cinemas and gyms are coordinated around their systems and equipment, with joinery, acoustics and finishes resolved together.

STONE THROUGHOUT THE HOME

Selected, cut and installed as one material story.

Slab selection, bookmatching, cutting layouts and edge details are defined before cutting, from feature walls and stairs to kitchens and terraces.

SCOPE

The home as one coordinated scope.

Room planning and connected scopes

Bespoke joinery and fitted furniture

Kitchens, wardrobes and storage

Stone, timber and specialist surfaces

Lighting, power and integrated-controls coordination

Curtains, blinds and window treatments

Furniture, rugs, art and styling

Installation, snagging and handover

Each layer is agreed before manufacture or site work begins, so joinery, stone, lighting and furnishings arrive as one finished home rather than a series of separate jobs.

THE PROPERTY

Different homes. Different constraints.

Villa

Existing services, outdoor connections, family routines, staff areas, access and community approvals shape the programme.

Apartment and penthouse

Building rules, lift and loading access, working hours, neighbour protection and service routes are planned early.

Branded residence

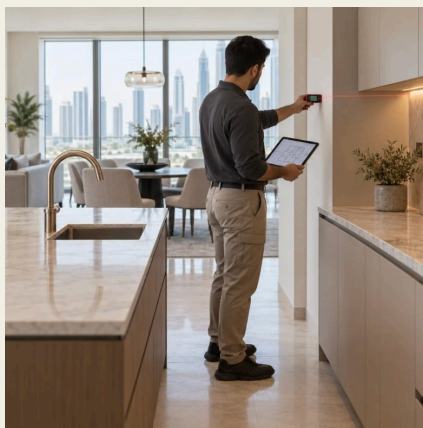

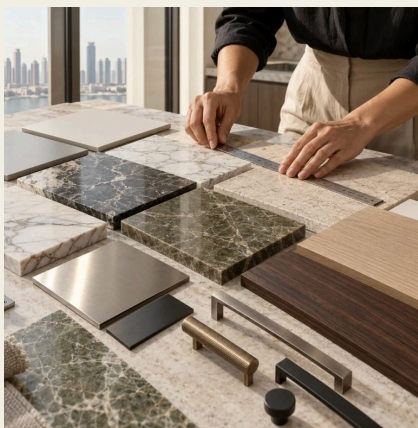

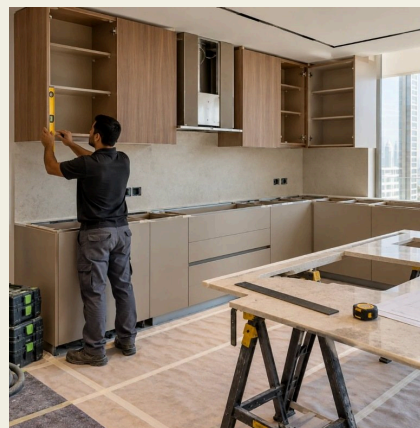

Developer standards, operator requirements, concierge coordination and the expectations of a finished residence call for a quieter, more exact delivery process.

BUILDING AND COMMUNITY REQUIREMENTS

Where the building or community requires work permits, access bookings, protection, lift reservations or technical submissions, these are identified before work begins and coordinated for the agreed scope.

EL MÉTODO

A clear route from first room to final handover.

- 01** Define
Visit the home, understand how it is used and identify the connected work.
- 02** Freeze
Agree scope, interfaces, selections and sequence before manufacture or site work.
- 03** Make
Coordinate joinery, stone, specialist items and procured pieces to one approved brief.
- 04** Deliver
Manage access, protection, installation and sequence.
- 05** Close
Snag, record and hand over the agreed work cleanly.

COMPLETION

From fitted work to a finished home.

READY TO LIVE IN

Joinery and finishes establish the architecture of a room. Furniture, lighting, rugs, art and window treatments make it ready to live in. The furnishing scope can sit inside a wider project or follow once the fitted work is complete.

LOOKED AFTER AFTER HANDOVER

For owners who travel or live abroad, Home Care can cover planned checks, curtain and joinery care, small repairs, pre-arrival preparation and the coordination of agreed refresh work.

Clear before work begins.

SCOPE AND PRICE

The selected materials, inclusions and exclusions are set out in the written quotation before work starts.

PROGRAMME

The survey, approvals, manufacture and installation sequence are shown for the specific scope and property.

WARRANTY AND AFTERCARE

Workmanship and product terms are stated in the written proposal, with an aftercare route for agreed work.

NEXT STEP

Start with a visit to your home.

Show us the room, what is not working and what you would like to change. Home visits are available across Dubai, including evenings and weekends. The initial review and quotation are free and without obligation.

Plans and photos are helpful but optional.
